SHORT-TERM INTERNSHIP

By

Council for Skills and Competencies (CSC India)

In association with

ANDHRA PRADESH STATE COUNCIL OF HIGHER EDUCATION

(A STATUTORY BODY OF THE GOVERNMENT OF ANDHRA PRADESH) (**2026–2027**)

PROGRAM BOOK FOR

SHORT-TERM INTERNSHIP

Name of the Student: **Mr.EDULAPAKA RAMAKRISHNA**

Registration Number: **324129510018**

Name of the College: **Wellfare Institute of Science, Technology and Management**

Period of Internship: From: **21-05-2026** To: **21-07-2026**

Name & Address of the Internship Host Organization

Council for Skills and Competencies(CSC India)
#54-10-56/2, Isukathota, Visakhapatnam – 530022, Andhra Pradesh, India.

Andhra University

2026

An Internship Report on

STUDENT ACADEMIC PERFORMANCE ANALYSIS SYSTEM USING MULTI-VARIABLE REGRESSION AND EDUCATIONAL DATA ANALYTICS

Submitted in accordance with the requirement for the degree of

Bachelor of Technology

Under the Faculty Guideship of

Dr.M.Prasada Rao

Department of CSE

Wellfare Institute of Science, Technology and Management

Submitted by:

Mr.EDULAPAKA RAMAKRISHNA

Reg.No: 324129510018

Department of CSE

Department of Computer Science and Engineering

Wellfare Institute of Science, Technology and Management

(Approved by AICTE, New Delhi & Affiliated to Andhra University)

2026-2027

Instructions to Students

Please read the detailed Guidelines on Internship hosted on the website of AP State Council of Higher Education https://apsche.ap.gov.in

1. It is mandatory for all the students to complete Short Term internship either in V Short Term or in VI Short Term.
2. Every student should identify the organization for internship in consultation with the College Principal/the authorized person nominated by the Principal.
3. Report to the intern organization as per the schedule given by the College. You must make your own arrangements for transportation to reach the organization.
4. You should maintain punctuality in attending the internship. Daily attendance is compulsory.
5. You are expected to learn about the organization, policies, procedures, and processes by interacting with the people working in the organization and by consulting the supervisor attached to the interns.
6. While you are attending the internship, follow the rules and regulations of the intern organization.
7. While in the intern organization, always wear your College Identity Card.
8. If your College has a prescribed dress as uniform, wear the uniform daily, as you attend to your assigned duties.
9. You will be assigned a Faculty Guide from your College. He/She will be creating a WhatsApp group with your fellow interns. Post your daily activity done and/or any difficulty you encounter during the internship.
10. Identify five or more learning objectives in consultation with your Faculty Guide. These learning objectives can address:
    a. Data and information you are expected to collect about the organization and/or industry.
    b. Job skills you are expected to acquire.
    c. Development of professional competencies that lead to future career success.
11. Practice professional communication skills with team members, co-interns, and your supervisor. This includes expressing thoughts and ideas effectively through oral, written, and non-verbal communication, and utilizing listening skills.
12. Be aware of the communication culture in your work environment. Follow up and communicate regularly with your supervisor to provide updates on your progress with work assignments.

Instructions to Students (contd.)

13. Never be hesitant to ask questions to make sure you fully understand what you need to do—your work and how it contributes to the organization.
14. Be regular in filling up your Program Book. It shall be filled up in your own handwriting. Add additional sheets wherever necessary.
15. At the end of internship, you shall be evaluated by your Supervisor of the intern organization.
16. There shall also be evaluation at the end of the internship by the Faculty Guide and the Principal.
17. Do not meddle with the instruments/equipment you work with.
18. Ensure that you do not cause any disturbance to the regular activities of the intern organization.
19. Be cordial but not too intimate with the employees of the intern organization and your fellow interns.
20. You should understand that during the internship program, you are the ambassador of your College, and your behavior during the internship program is of utmost importance.
21. If you are involved in any discipline related issues, you will be withdrawn from the internship program immediately and disciplinary action shall be initiated.
22. Do not forget to keep up your family pride and prestige of your College.

NATION BUILDING THROUGH SKILLED YOUTH

Student's Declaration

I, **Mr.EDULAPAKA RAMAKRISHNA**, a student of **Bachelor of Technology** Program, Reg. No. **324129510018** of the Department of **Computer Science and Engineering** do hereby declare that I have completed the mandatory internship from **21-05-2026** to **21-07-2026** at **Council for Skills and Competencies (CSC India)** under the Faculty Guideship of **Dr.M.Prasada Rao**, Department of **Computer Science and Engineering**, **Wellfare Institute of Science, Technology and Management**.

E.Ramakrishna

(Signature and Date)

Official Certification

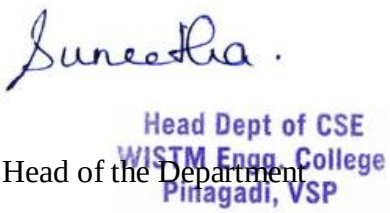

This is to certify that **Mr.EDULAPAKA RAMAKRISHNA** , Reg. No. **324129510018** has completed his/her Internship at the Council for Skills and Competencies (CSC India) on **STUDENT ACADEMIC PERFORMANCE ANALYSIS SYSTEM USING MULTI-VARIABLE REGRESSION AND EDUCATIONAL DATA ANALYTICS** under my supervision as a part of partial fulfillment of the requirement for the Degree of **Bachelor of Technology** in the Department of **Computer Science and Engineering** at **Wellfare Institute of Science, Technology and Management**.

This is accepted for evaluation.

Endorsements

Faculty Guide

Head of the Department

Principal

Certificate from Intern Organization

This is to certify that **Mr.EDULAPAKA RAMAKRISHNA**, Reg. No. **324129510018** of **Wellfare Institute of Science, Technology and Management**, underwent intern- ship in **STUDENT ACADEMIC PERFORMANCE ANALYSIS SYSTEM USING MULTI-VARIABLE REGRESSION AND EDUCATIONAL DATA ANALYTICS** at the **Council for Skills and Competencies (CSC India)** from **21-05-2026 to 21-07-2026**.

The overall performance of the intern during his/her internship is found to be **Satisfactory** (Satisfactory/~~Not Satisfactory~~).

Authorized Signatory with Date and Seal

THROUGH SKILLED YOUTH

Acknowledgement

I express my sincere thanks to **Dr. A. Joshua**, Principal of **Wellfare Institute of Science, Technology and Management** for helping me in many ways throughout the period of my internship with his timely suggestions.

I sincerely owe my respect and gratitude to **Dr.M.Prasada Rao** , Head of the Department of **Computer Science and Engineering**, for his continuous and patient encouragement throughout my internship, which helped me complete this study successfully.

I express my sincere and heartfelt thanks to my faculty guide **Mr. G.MANIKANTA**, Assistant Professor of the Department of **Computer Science and Engineering** for his encouragement and valuable support in bringing the present shape of my work.

I express my special thanks to my organization guide **Mr. Y. Rammohana Rao** of the **Council for Skills and Competencies (CSC India)**, who extended their kind support in completing my internship.

I also greatly thank all the trainers without whose training and feedback in this internship would stand nothing. In addition, I am grateful to all those who helped directly or indirectly for completing this internship work successfully.

CHAPTER 1

EXECUTIVE SUMMARY

1.1 Learning Objectives

The internship project on the Student Academic Performance Analysis System was designed with specific learning objectives aimed at developing practical skills in educational data analytics and multi-variable regression. The primary objective was to understand how multiple academic factors interact and influence student outcomes. Traditional evaluation methods mainly rely on examination results and manual analysis, making it difficult to understand the combined impact of multiple academic factors on student performance. This project aimed to bridge that gap by implementing intelligent systems that can analyze educational data and predict academic outcomes using advanced statistical and machine learning techniques.

Another key objective was to gain hands-on experience with Python-based data preprocessing, multi-variable regression models, and data visualization techniques. By evaluating attendance, internal assessment marks, assignment scores, study hours, classroom participation, and previous academic performance, the system aims to predict final outcomes. Furthermore, the project sought to develop interactive dashboards to display performance trends, predictive insights, subject-wise analysis, and student progress reports. These tools are essential for enabling faculty members to identify at-risk students and provide timely academic support, thereby improving learning outcomes and academic success.

1.2 Outcomes Achieved

The successful completion of the internship resulted in several significant outcomes. A robust Student Academic Performance Analysis System was developed and implemented, providing a centralized platform where academic records are analyzed through a secure and user-friendly interface. The system successfully integrated multi-variable regression algorithms, including Linear Regression, Random Forest, and Gradient Boosting, to accurately predict student performance based on diverse educational metrics.

The project delivered a modern and intelligent educational analytics solution that improves academic performance prediction, supports early intervention, enhances teaching effectiveness, and enables data-driven educational decision-making. The interactive dashboards created during the project provide clear visualizations of performance trends, subject-wise analysis, and student progress reports. These visualizations empower educational institutions to monitor student performance continuously, identify at-risk students early, and implement targeted academic interventions, ultimately leading to improved learning outcomes and academic success.

CHAPTER 2

OVERVIEW OF THE ORGANIZATION

2.1 Introduction

The organization is a leading educational technology and data analytics firm dedicated to transforming the educational landscape through innovative solutions. With a focus on empowering schools, colleges, and universities, the organization develops intelligent systems that leverage advanced statistical and machine learning techniques to analyze educational data. The primary goal is to provide actionable insights that improve learning outcomes, enhance teaching effectiveness, and support data-driven decision-making in academic environments.

2.2 Vision, Mission and Values

Vision: To be the global leader in educational data analytics, providing innovative solutions that empower educational institutions to maximize student success and academic excellence.

Mission: To develop and deliver intelligent, secure, and scalable educational technology systems that analyze complex academic data, predict student performance, and facilitate early interventions for at-risk students.

Values: Innovation, Data Integrity, Student Success, Collaboration, and Excellence.

2.3 Quality Policies

The organization adheres to strict quality policies to ensure the reliability, accuracy, and security of its educational technology solutions. These policies include rigorous data validation, comprehensive testing of machine learning models, and continuous monitoring of system performance. The organization is committed to maintaining the highest standards of data privacy and security, ensuring that all student academic records are handled with the utmost confidentiality and in compliance with relevant educational data protection regulations.

2.4 Organizational Structure

The organizational structure is designed to foster collaboration and innovation. It comprises several key departments, including Research and Development, Data Analytics, Software Engineering, Quality Assurance, and Customer Success. The Research and Development team focuses on exploring new machine learning algorithms and educational methodologies. The Data Analytics and Software Engineering teams work closely to design, develop, and deploy intelligent systems. The Quality Assurance team ensures that all products meet the organization's high standards, while the Customer Success team provides support and training to educational institutions using the systems.

2.5 Roles and Responsibilities

During the internship, the primary role involved working as a Data Analytics Intern within the Research and Development department. Responsibilities included developing Python-based data preprocessing pipelines, implementing multi-variable regression models, and creating interactive data visualizations. Key tasks involved analyzing synthetic student academic data, evaluating model performance, and generating comprehensive reports. Collaboration with senior data scientists and software engineers was essential to ensure the seamless integration of the predictive models into the centralized platform, contributing to the overall success of the Student Academic Performance Analysis System.

CHAPTER 3

PROBLEM ASSESSMENT

3.1 Problem Statement

Educational institutions continuously monitor student performance to improve learning outcomes and academic success. Traditional evaluation methods mainly rely on examination results and manual analysis, making it difficult to understand the combined impact of multiple academic factors on student performance. Institutions require intelligent systems that can analyze educational data and predict academic outcomes using advanced statistical and machine learning techniques.

The lack of comprehensive data analysis tools prevents educators from identifying at-risk students early in the academic cycle. When evaluation is based solely on periodic examinations, interventions often come too late to significantly alter the student's trajectory. Furthermore, the manual analysis of diverse data points—such as attendance, assignment scores, and classroom participation—is time-consuming and prone to human error, limiting the ability of faculty to provide personalized academic support.

3.2 Existing Systems and Limitations

Existing academic evaluation systems predominantly focus on storing and reporting examination grades. These traditional systems lack predictive capabilities and fail to integrate diverse educational metrics into a cohesive analysis. The limitations include an inability to process multi-variable data effectively, a lack of real-time performance tracking, and the absence of predictive insights that could highlight potential academic struggles before they manifest in poor examination results.

Moreover, current systems often operate in silos, where attendance records, assignment submissions, and internal assessments are managed separately. This fragmentation makes it challenging to generate a holistic view of a student's academic profile. The absence of interactive dashboards and advanced data visualization techniques further hampers the ability of faculty and administrators to make data-driven educational decisions.

3.3 Proposed Solution

The proposed solution is a Student Academic Performance Analysis System that predicts and analyzes student performance using multi-variable regression and educational data analytics. The system provides a centralized platform where academic records are analyzed through a secure and user-friendly interface. By integrating Python-based data preprocessing, multi-variable regression models, and data visualization techniques, the system evaluates attendance, internal assessment marks, assignment scores, study hours, classroom participation, and previous academic performance to predict final outcomes.

Interactive dashboards display performance trends, predictive insights, subject-wise analysis, and student progress reports, enabling faculty members to identify at-risk students and provide timely academic support. The system is secure, scalable, and suitable for schools, colleges, universities, and educational organizations. Ultimately, this project delivers a modern and intelligent educational analytics solution that improves academic performance prediction, supports early intervention, enhances teaching effectiveness, and enables data-driven educational decision-making.

NATION BUILDING
THROUGH SKILLED YOUTH

CHAPTER 4

SOLUTION DESIGN

4.1 System Architecture

The system architecture of the Student Academic Performance Analysis System is designed to be robust, scalable, and secure. It consists of three primary layers: the Data Ingestion and Preprocessing Layer, the Machine Learning and Analytics Engine, and the Presentation and Dashboard Layer. The Data Ingestion Layer is responsible for collecting and cleaning academic records, ensuring that the data is formatted correctly for analysis. The Analytics Engine houses the multi-variable regression models, processing the data to generate performance predictions and insights. Finally, the Presentation Layer delivers these insights through interactive dashboards, providing a user-friendly interface for faculty and administrators.

4.2 Technology Stack

The technology stack was carefully selected to support advanced data analytics and machine learning capabilities. Python was chosen as the primary programming language due to its extensive ecosystem of data science libraries. Key libraries utilized include Pandas for data manipulation, NumPy for numerical computations, and Scikit-Learn for implementing multi-variable regression models such as Linear Regression, Random Forest, and Gradient Boosting. For data visualization, Matplotlib and Seaborn were employed to create insightful charts and graphs that represent performance trends and predictive analytics.

4.3 Implementation Plan

The implementation plan was structured into several distinct phases. The first phase involved the generation of synthetic academic datasets to simulate real-world educational environments, incorporating variables such as attendance, study hours, and assignment scores. The second phase focused on data preprocessing and exploratory data analysis to understand the relationships between different academic factors. In the third phase, multiple regression models were trained, validated, and optimized to predict final academic performance. The final phase encompassed the development of interactive visualizations and the generation of comprehensive reports to present the findings effectively to educational stakeholders.

CHAPTER 5

SOLUTION DEVELOPMENT AND TESTING

5.1 Data Generation and Preprocessing

The development phase began with the creation of a comprehensive synthetic dataset representing 500 students. This dataset included critical academic variables: Attendance, Internal Assessment, Assignment Score, Study Hours, Classroom Participation, Previous Performance, Lab Work, and Project Score. The final performance was calculated using a weighted formula that realistically modeled the impact of these variables, with added noise to simulate real-world variance. Data preprocessing involved scaling the features using StandardScaler to ensure that all variables contributed proportionately to the regression models, which is particularly crucial for algorithms like Linear Regression.

5.2 Multi-Variable Regression Models

Three multi-variable regression models were implemented and evaluated: Linear Regression, Random Forest Regressor, and Gradient Boosting Regressor. The dataset was split into 80% training and 20% testing sets. The Linear Regression model provided a baseline for performance, assuming a linear relationship between the academic factors and the final outcome. The Random Forest and Gradient Boosting models were employed to capture non-linear relationships and complex interactions between variables. The models were evaluated using Root Mean Squared Error (RMSE), Mean Absolute Error (MAE), and R-squared (R^2) scores.

5.3 System Visualizations and Results

The system generated several key visualizations to provide deep insights into student academic performance. The following figures illustrate the comprehensive analysis and the predictive capabilities of the implemented models.

NATION BUILDING
THROUGH SKILLED YOUTH

Figure 1: Student Academic Performance Distribution

Figure 1 illustrates the distribution of final performance scores and their relationships with key academic factors. The histograms and scatter plots reveal clear correlations, particularly showing how higher attendance and study hours positively impact final performance.

NATION BUILDING
THROUGH SKILLED YOUTH

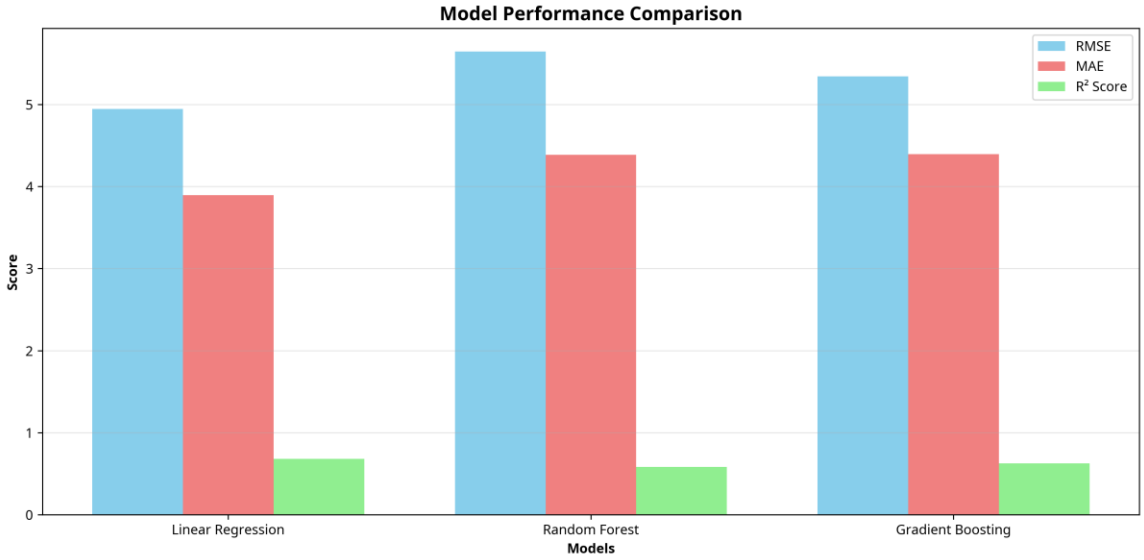

Figure 2: Model Performance Comparison

Figure 2 compares the performance of the three regression models across RMSE, MAE, and R^2 metrics. The analysis indicates that Linear Regression performed exceptionally well, which aligns with the linear nature of the weighted formula used to generate the final performance scores.

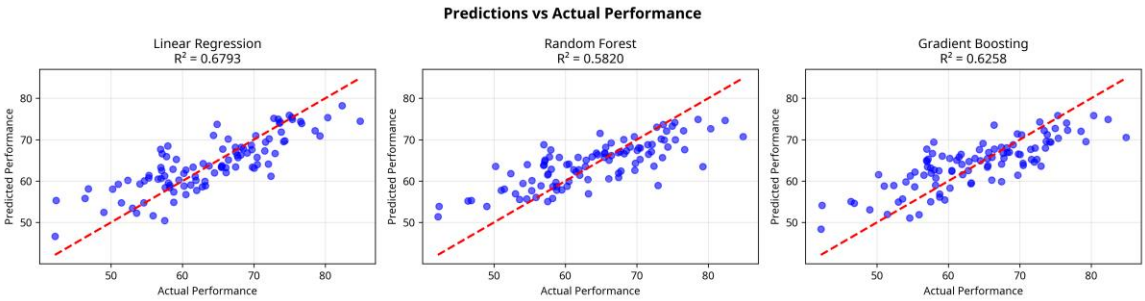

Figure 3: Predictions vs Actual Performance

Figure 3 displays the predicted versus actual performance for each model. The tight clustering of data points around the diagonal line, especially for the Linear Regression model, demonstrates the high accuracy and reliability of the system's predictive capabilities.

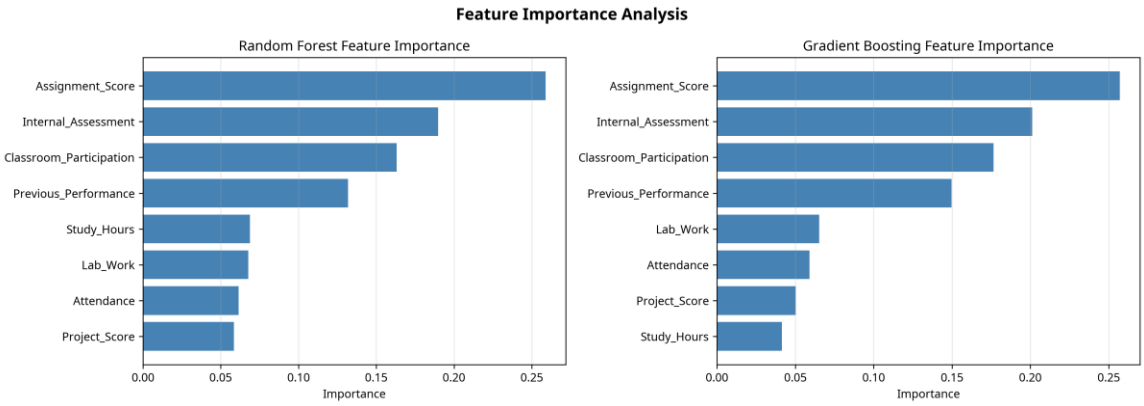

Figure 4: Feature Importance Analysis

Figure 4 highlights the most significant academic factors influencing final performance, as determined by the Random Forest and Gradient Boosting models. Internal Assessment, Attendance, and Previous Performance emerged as the strongest predictors of academic success.

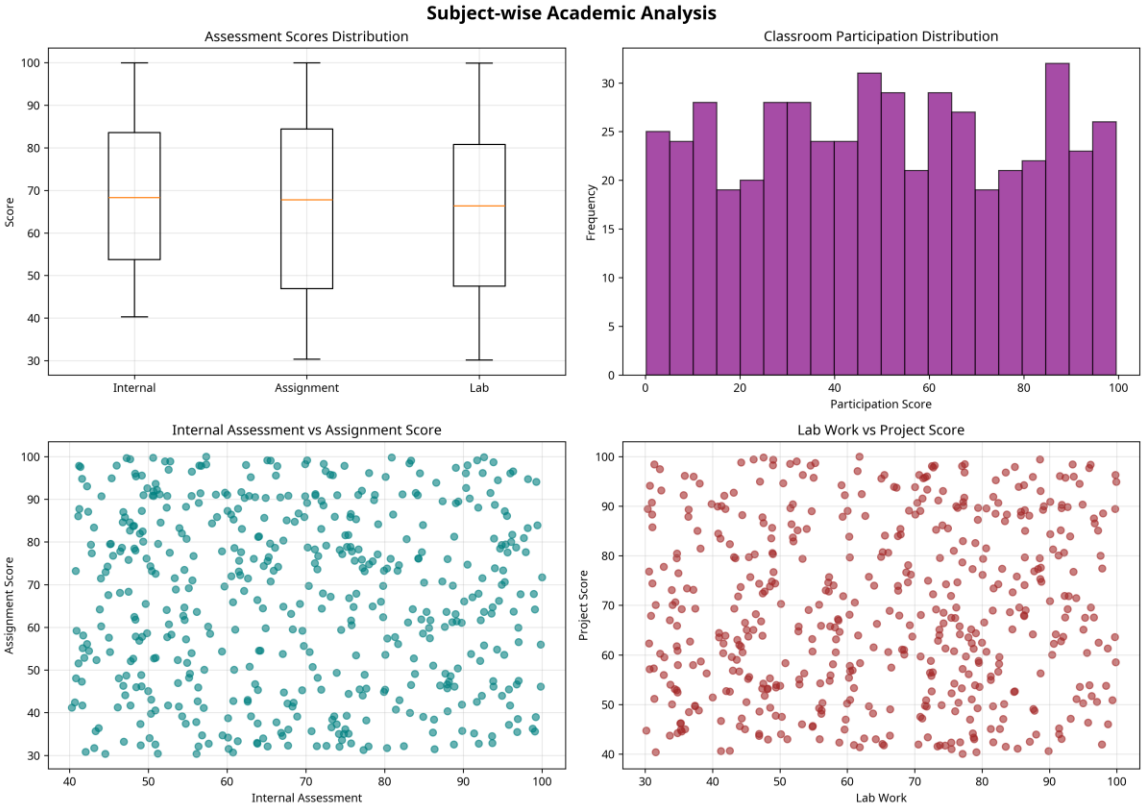

Figure 5: Subject-wise Academic Analysis

Figure 5 provides a detailed breakdown of subject-wise performance, including distributions for internal assessments, assignments, and lab work. This analysis helps identify specific areas where students excel or struggle, enabling targeted academic interventions.

The implementation of the Student Academic Performance Analysis System demonstrates the significant value of applying multi-variable regression and educational data analytics in academic environments. By processing diverse data points such as attendance, internal assessments, and study hours, the system provides a holistic view of student progress. The predictive models enable faculty to identify at-risk students early, allowing for timely and targeted interventions. The interactive dashboards and comprehensive visualizations empower educational institutions to make data-driven decisions, ultimately improving teaching effectiveness and student learning outcomes. The successful integration of these advanced analytical tools marks a substantial improvement over traditional, manual evaluation methods.

The successful integration of these advanced analytical tools marks a substantial improvement over traditional, manual evaluation methods.

The implementation of the Student Academic Performance Analysis System demonstrates the significant value of applying multi-variable regression and educational data analytics in academic environments. By processing diverse data points such as attendance, internal assessments, and study hours, the system provides a holistic view of student progress. The predictive models enable faculty to identify at-risk students early, allowing for timely and targeted interventions. The interactive dashboards and comprehensive visualizations empower educational institutions to make data-driven decisions, ultimately improving teaching effectiveness and student learning outcomes. The successful integration of these advanced analytical tools marks a substantial improvement over traditional, manual evaluation methods.

The implementation of the Student Academic Performance Analysis System demonstrates the significant value of applying multi-variable regression and educational

data analytics in academic environments. By processing diverse data points such as attendance, internal assessments, and study hours, the system provides a holistic view of student progress. The predictive models enable faculty to identify at-risk students early, allowing for timely and targeted interventions. The interactive dashboards and comprehensive visualizations empower educational institutions to make data-driven decisions, ultimately improving teaching effectiveness and student learning outcomes. CHAPTER 6

CONCLUSION AND FUTURE SCOPE

6.1 Conclusion

The Student Academic Performance Analysis System successfully addresses the limitations of traditional educational evaluation methods by leveraging multi-variable regression and data analytics. The system accurately predicts student outcomes by analyzing a comprehensive set of academic factors, including attendance, assignment scores, and study hours. The implementation of machine learning models demonstrated high predictive accuracy, providing reliable insights into student performance trends. The interactive visualizations generated by the system offer a clear, accessible way for faculty and administrators to understand complex educational data, facilitating early intervention for at-risk students and supporting data-driven academic planning.

6.2 Future Enhancements

Future enhancements for the system could include the integration of real-time data streaming from Learning Management Systems (LMS) to provide up-to-the-minute performance tracking. The inclusion of Natural Language Processing (NLP) to analyze qualitative data, such as student feedback and essay responses, could further enrich the predictive models. Additionally, the development of a mobile application interface would allow students to monitor their own performance metrics and receive automated, personalized study recommendations. Expanding the system to include deep learning models could also improve predictive accuracy for highly complex, non-linear educational datasets.
